Introduction

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccups, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation of the subject.

Acupuncture or acupressure at the Neiguan (P6) point, the most frequently used acupoint in the pericardium meridian, has been shown to lessen nausea and vomiting (Dundee et al., 1987, 1988, 1989a and b; Ho et al., 1989; De Aloysio and Penachioni, 1992; Belluomini et al., 1994; Fan et al., 1997; Harmon et al., 2000). Because nausea and vomiting are also related to autonomic nervous activity (Morrow et al., 1992; Morrow et al., 1999), we speculated that the autonomic nervous activity might be changed when acupuncture at the P6 point was performed.

Heart rate variability analysis is a useful non-invasive method for the assessment of autonomic nervous modulation of heart rate. Some diseases are associated with depressed vagal modulation, and the restoration of vagal modulation is associated with the improvement

School-based programmes for preventing smoking (Review)

Thomas RE, McLellan J, Perera R
Background

Helping young people to avoid starting smoking is a widely endorsed public health goal, and schools provide a route to communicate with nearly all young people. School-based interventions have been delivered for close to 40 years.

Objectives

The primary aim of this review was to determine whether school smoking interventions prevent youth from starting smoking. Our secondary objective was to determine which interventions were most effective. This included evaluating the effects of theoretical approaches; additional booster sessions; programme deliverers; gender effects; and multifocal interventions versus those focused solely on smoking.

Search methods

We searched the Cochrane Central Register of Controlled Trials (CENTRAL), the Cochrane Tobacco Addiction Group’s Specialised Register, MEDLINE, EMBASE, PsycINFO, ERIC, CINAHL, Health Star, and Dissertation Abstracts for terms relating to school-based smoking cessation programmes. In addition, we screened the bibliographies of articles and ran individual MEDLINE searches for 133 authors who had undertaken randomised controlled trials in this area. The most recent searches were conducted in October 2012.

Selection criteria

We selected randomised controlled trials (RCTs) where students, classes, schools, or school districts were randomised to intervention arm(s) versus a control group, and followed for at least six months. Participants had to be youth (aged 5 to 18). Interventions could be any curricula used in a school setting to deter tobacco use, and outcome measures could be never smoking, frequency of smoking, number of cigarettes smoked, or smoking indices.

Data collection and analysis

Two reviewers independently assessed studies for inclusion, extracted data and assessed risk of bias. Based on the type of outcome, we placed studies into three groups for analysis: Pure Prevention cohorts (Group 1), Change in Smoking Behaviour over time (Group 2) and Point Prevalence of Smoking (Group 3).

Immunogenicity and Tolerability after Two Doses of Non-Adjuvanted, Whole-Virion Pandemic Influenza A (H1N1) Vaccine in HIV-Infected Individuals

Abstract

Background: During the influenza pandemic of 2009/10, the whole-virion, Vero-cell-derived, inactivated, pandemic influenza A (H1N1) vaccine Celvapan® (Baxter) was used in Austria. Celvapan® is adjuvant-free and was the only such vaccine at that time in Europe. The objective of this observational, non-interventional, prospective single-center study was to evaluate the immunogenicity and tolerability of two intramuscular doses of this novel vaccine in HIV-positive individuals.

Methods and Findings: A standard hemagglutination inhibition (HAI) assay was used for evaluation of the seroconversion rate and seroprotection against the pandemic H1N1 strain. In addition, H1N1-specific IgG antibodies were measured using a recently developed ELISA and compared with the HAI results. Tolerability of vaccination was evaluated up to one month after the second dose. A total of 79 HIV-infected adults with an indication for H1N1 vaccination were evaluated. At baseline, 55 of the 79 participants had an HAI titer ≥ 1:40 and 24% showed a positive IgG ELISA. The seroconversion rate was 20% after the first vaccination, increasing to 41% after the second; the corresponding seroprotection rates were 92% and 83% respectively. ELISA IgG levels were positive in 25% after the first vaccination and in 37% after the second. Among the participants with baseline HAI titers <1:40, 63% seroconverted. Young age was clearly associated with lower HAI titers at

群組分類管理

管理參考文獻與全文資料最有效率
群組分類管理

1. **Group**: 可在 **Group Set** 底下的空白處點選滑鼠右鍵，選擇 **Create Group**，或者從 **Groups** 選單建立。

2. **Smart Group**: 智慧群組可以利用檢索條件設定好，日後有符合條件的文獻紀錄匯入 **library**，即可自動分入此群組。

3. **Group Set**: 可以針對同類型或同性質的文獻歸類在同一分類下，而此分類可以進一步建立子分類 **(Group)**，或者智慧群組 **(Smart Groups)**，亦可更名、刪除。

4. **From groups**: 讓使用者可以利用布林邏輯進一步合併既有的群組。
把選取之書目資料用拖曳的方式放進新資料夾中

想要更改檔名，在資料夾上按右鍵→選Rename Group

新設資料夾Create Group
分類參考書目 (Smart Group)

1. 輸入條件
2. 輸入條件
3. Create
1. 另外新設一個群組：
   Group → Greate Group Set → 設一個新的Set

2. 給新Set一個名字（例如：Medicine）

3. 把Cancer資料夾拖曳至Medicine
1. 從群組分類按滑鼠右鍵，選擇Create From Groups...
2. 再下拉式選單中選取欲邏輯搭配的群組。
3. 合併的新群組會出現在群組分類(My Groups)或其他Group set下方。
重複參考文獻管理
重複參考文獻管理

1. 選取好所有參考書目。

2. Reference > Find Duplicates，會出現兩兩比較的視窗。

3. 可從兩邊的資料來確定資料保留與否，保留某一篇，點選Keep This Record。

4. 都須保留可以Skip。
偏好設定
改變Library欄位呈現

下拉選單選擇所要呈現之欄位

可更改欄位名稱
改變 Library 呈現字型

Library 」：改變 Library 視窗中呈現參考文獻清單之字型與大小。改變標題大小

Search：字型決定使用者在檢索欄位中輸入之字體大小。
設定Read/Unread狀態

1. Mark a reference as read upon viewing it in a stand-alone Reference window：只有自行將改成或是點兩下該筆書目資料才會變成Read狀態。
2. Mark a reference as read upon viewing it in the Reference, PDF, or Preview within the Library window：只要在Reference, PDF, Preview三個視窗之一閱讀該筆書目之資料即會變成Read狀態。
3. Mark a reference as read upon changing its rating：只要改變Rating星星數即會變成Read狀態。
